1 Overview

1.1 This solution

Inland Revenue has a suite of digital services available for consumption by our service providers that supports efficient, electronic business interactions with Inland Revenue. The Notification Service described in this build pack document enables actionable event notifications to be retrieved by external software platforms.

Notifications are very lean. They are delivered to software rather than people. It is the responsibility of the software to prioritise, filter and decide when and how to respond to each notification using the data within it. The data in the notification is sufficient for this purpose and nothing more—for example, it may identify that an address or a filing frequency has changed, but it does not contain the newly-changed address or the new filing frequency.

Before continuing, please consult
www.ird.govt.nz/digital-service-providers/services-catalogue
for business-level context, use cases and links to relevant policy.
The information available here explains how to integrate with Inland
Revenue's services.

1.2 Intended audience

The solution outlined in this document is intended to be used by payroll providers, tax practitioners, KiwiSaver providers, banks and other financial institutions (referred to throughout the remainder of this document as 'Digital Service Providers').

The reader is assumed to have a suitable level of technical knowledge in order to comprehend the terms and abbreviations are used throughout this document.

1.3 Related services

The following application programming interfaces (APIs) complement this Gateway Service. Instructions on where to find the build packs for these APIs can be found in [section 3](#) of this document.

1.3.1 Identity and Access Services (required)

The Identity and Access Services (IAS) are used to authenticate access. Authentication tokens will need to be retrieved via IAS prior to making calls to this API.

2 Solution design

2.1 Architecture

Inland Revenue is offering a suite of web applications in order to facilitate interactions via software packages. This API will be used by approved organisations to retrieve notifications from Inland Revenue.

The diagram below illustrates the flow of data from Inland Revenue to the Digital Service Providers.

2.2 Messaging

This service supports the following message type:

- **READ:** Retrieve notifications from Inland Revenue. Requires a 'from' date (with optional query ID), query ID type and a 'to' date.

2.2.1 Notification Retrieve

2.2.1.1 Request payload

Field	Description
QueryIDType	A set of ID types used to filter notifications
QueryID	The value of the above type
FromDateTime	The earliest point in time from which notifications can be selected based on their date-time stamp
ToDateTime	The latest point in time up to which notifications can be selected based on their date-time stamp. May be useful as a form of pagination.

A list of the valid values for **QueryIDType** is as follows:

Type	Description	Recipients
CLTLID	Non-tax agent client list identifier	Multiple recipients
CST	A non-IRD Number type identifier	Single recipient
IRD	Inland Revenue Department ID	Single recipient
KSF	KiwiSaver Scheme ID	Multiple recipients
LSTID	Tax agent or PAYE Intermediary client list identifier	Multiple recipients

NOTE: **QueryID** and **QueryIDType** are to be used for filtering notifications, either down to a specific recipient or a set of recipients, depending on the **QueryIDType**. For both **CLTLID** and **LSTID**, notifications are returned for linked clients on the given client list. To return notifications for other combinations of multiple recipients, **QueryID** and **QueryIDType** should be omitted and **FromDateTime** should be used to limit the notifications returned.

2.2.2 Record ID

Field	Description
NotificationKey	Unique notification identifier
RecordCreated	Point in time the notification object was created
EventDate	Date time corresponding to event that created this notification
Category	Notification category

Field	Description
SubCategory	Notification sub-category
Type	Notification type
Description	A description of the notification
DocumentID	<p>An identifier of a document that can be retrieved through the document service</p> <p>NOTE: A DocumentID of zero signifies there is no value. Only invoke the document service if the DocumentID value is greater than zero.</p>
DocumentLocationID	<p>An identifier that is used to properly route a document submitted through the document service</p> <p>NOTE: A DocumentLocationID of zero signifies there is no value. Only invoke the document service if the DocumentLocationID value is greater than zero.</p>
ExtID	An external ID for providing more information with a notification
ExtIDType	The type of ExtID, if one is provided
IDType	An ID Type for the entity to whom the notification corresponds
ID	The ID for the entity to whom the notification corresponds
SubjectIDType	The ID type of the subject of the notification, if applicable
SubjectID	The ID of the subject of the notification, if applicable. If the notification pertains to a second customer, such as an employee of an employer or a member of a KiwiSaver scheme.
FilingPeriod	The end of the filing period to which the notification corresponds, if applicable
DueDate	A due date corresponding to the notification, if applicable

2.2.2.1 Notification limit

A limit is imposed on the number of notifications that are returned per call. This limit is currently 16,000 (sixteen thousand) notifications, as this value aligns to the maximum message size imposed by commonly used firewall devices. If this limit is exceeded, an error (NOT001) is returned, in which case the API caller is advised to reduce the size of the query using the FromDateTime and QueryID/QueryIDType parameters.

2.2.3 Bankruptcy

After October 2021, Inland Revenue will no longer issue new IRD numbers for bankrupt clients. When a client's bankruptcy is finalised, the existing income tax account will be closed (pre-adjudicated), and a new account will be opened (post-adjudicated). This will result in multiple income tax accounts for a single IRD number. Notifications will only be returned that are associated to the post adjudicated account.

2.3 Security

2.3.1 Information classification

The information exchanged via this service has an information classification of “**IN CONFIDENCE**”. The following security standards therefore apply.

2.3.2 Transport layer security and certificates

Mutual Transport Layer Security (TLS) is implemented for this service. This requires the use of a publicly-issued X.509 certificate from one of the trusted certificate authorities listed further below in this section. (Note that Inland Revenue does not issue certificates to external vendors for web service security implementations.)

Inland Revenue has the following requirements for accepting public X.509 keys:

- ECDSA (preferred) key length: 384 bits (or RSA key length: 2048 bits)
- Self-signed certificates are not accepted
- Certificates issued by private/internal certificate authorities are not accepted
- The same certificate cannot be used for the Test and Production environments.

Inland Revenue has adopted a trust-based authentication model and will only accept certificates that contain a pre-approved subject common name and have been issued by one of the following root certificate authorities, trusted and approved by Inland Revenue:

- [Amazon](#)
- [Comodo](#)
- [DigiCert](#)
- [Entrust](#)
- [GeoTrust](#)
- [Let's Encrypt](#)
- [Sectigo](#)
- [Thawte](#).

Inland Revenue expects Digital Service Providers to use their Inland Revenue Developer Portal account to create their common name for both Test and Production certificates.

Please refer to the [Digital Service Providers](#) pages on the Inland Revenue website or contact your Inland Revenue onboarding representative at GatewayServices@ird.govt.nz for further details.

2.3.3 Ciphers

Inland Revenue currently supports TLS1.2 and TLS1.3, with the latter specifying a much smaller and more prescriptive suite of ciphers. As Inland Revenue's security gateways do not currently support the CCM mode (*counter with cipher block chaining message authentication code*) of operation, only the following ciphers will be supported over TLS1.3:

Status	TLS1.3 ciphers
Supported now and in the future	<ul style="list-style-type: none"> • TLS_AES_128_GCM_SHA256 • TLS_AES_256_GCM_SHA384 • TLS_CHACHA20_POLY1305_SHA256

The following TLS1.2 ciphers are currently supported but some will be deprecated as below:

Status	TLS1.2 ciphers
Supported now and in the future	<ul style="list-style-type: none"> • TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384 • TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256
Supported now but will be deprecated on 31 March 2022	<ul style="list-style-type: none"> • TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA • TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA • TLS_RSA_WITH_AES_128_CBC_SHA • TLS_RSA_WITH_AES_256_CBC_SHA • TLS_DHE_RSA_WITH_AES_128_CBC_SHA • TLS_DHE_RSA_WITH_AES_128_CBC_SHA256 • TLS_DHE_RSA_WITH_AES_256_CBC_SHA • TLS_DHE_RSA_WITH_AES_256_CBC_SHA256 • TLS_DHE_RSA_WITH_AES_128_GCM_SHA256 • TLS_DHE_RSA_WITH_AES_256_GCM_SHA384
Supported now but will be deprecated on 31 December 2022	<ul style="list-style-type: none"> • TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256 • TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA384 • TLS_RSA_WITH_AES_128_CBC_SHA256 • TLS_RSA_WITH_AES_256_CBC_SHA256 • TLS_RSA_WITH_AES_128_GCM_SHA256 • TLS_RSA_WITH_AES_256_GCM_SHA384

2.3.4 Authentication options

This design will use JSON Web Tokens (JWT) or OAuth2.0 tokens and protocol to establish the calling party's identity. The OAuth2.0 method requires a myIR user to logon, while JWT is a machine-to-machine credential.

This API will require a unique identifier in order to establish the calling party's identity and to allow the access model to authenticate.

Delegated permissions: The services will allow one to retrieve all of the notification data for a customer or group of customers to which the calling user (as represented by the JWT or OAuth2 token) has access. There may be additional accounts to which this identity does not have access, but those will not be mentioned. If an account or data within it is targeted by the request parameters but the user does not have permission, an error will be returned.

Refer to the Identity and Access Services build pack for more information.

2.3.4.1 OAuth

When using OAuth, the interaction with Inland Revenue is transacted under the identity of a myIR user. OAuth requires the presence of a myIR user, as this person must be available to supply their user ID, password and consent at run-time in order to be authenticated. OAuth is especially suited to cloud-based applications where the transacting parties are application users rather than providers.

HTTP headers intended for OAuth access services will have the JWT prefixed with "Bearer ":

HTTP header	Example value
Authorization	Bearer {JWTAccessToken}

2.3.4.2 JWT

The alternative to OAuth is JWT, which does not require the presence of a myIR user. Authentication is based on the verification of a digital signature that (provably) belongs to a customer. In order to digitally sign their messages, the customer must acquire a digital certificate from a trusted certificate authority, or generate a self-signed certificate, and supply it to Inland Revenue during the on-boarding process. JWT is therefore appropriate when the following conditions apply:

- The interaction with Inland Revenue is conducted under the identity of an organisation, as opposed to a person AND
- The organisation has the technical and operational capability to securely obtain and manage digital certificates AND
- The organisation's interactions with Inland Revenue can occur in the absence of specific people due to staffing issues such as out-of-hours non-availability, staff turnover and absence from work.

These factors tend to limit the use JWT to larger corporations and public sector organisations. It is not suitable for cloud-based applications as it requires all application users to have their own digital certificates—this is administratively burdensome and requires these users to lodge their private keys with their application provider, which is insecure.

Gateway Services will use this token in the HTTP header of a message in the same manner that an OAuth token has been used, namely:

HTTP header	Example value
Authorization	{JWTAccessToken}

2.3.4.2.1. *startLogon*

A myIR logon can be provided in order to use the myIR delegation model for identifying customers for whom notifications should be retrieved. If the myIR logon is provided, then notifications will only be shown for customers the logon can access. If a myIR logon is not used, the field should be included with a value of null, and the subject will determine the notifications shown.

2.3.4.2.2. *sub*

A subject must be provided, which is the thumbprint of the signing certificate, and can be used to determine which notifications should be retrieved. The subject will always be used to validate the signature of the JWT but will only be used for determining which notifications to retrieve when value for **startLogon** is not provided. The subject can be used for access in two distinct situations, when the subject is a KiwiSaver scheme provider, or when the subject is a tax preparer. If the subject is a KiwiSaver scheme provider, notifications will be returned for the current members of the scheme. If the subject is a tax preparer, notifications will be returned for customers currently linked to the tax preparer.

3 Additional development resources

3.1 End points

Current environment information for this service—including the end points for each environment—is available within the relevant Software Development Kit (SDK).

To access the SDK, do one of the following:

- Go to <https://github.com/InlandRevenue> and select this service
- Go to <https://developerportal.ird.govt.nz> and click the link to the SDK within the Gateway Service documentation (please register first).

3.2 OpenAPI specifications

An OpenAPI file allows you to describe your entire API, endpoints, operations on each endpoint, and operation parameters. The included .yaml file can be used along with an OpenAPI editor such as editor.swagger.io to view technical specifications for this operation and generate example client code.

To access the latest OpenAPI definition for this service, please do the following:

- Login to the developer portal at <https://developerportal.ird.govt.nz> (register first)
- Download and view the OpenAPI definition within the Gateway Service documentation.

4.1 Available notifications

Type	Category	Sub-category	Description
KSSS1	Action Required	Employer	Employee has started KiwiSaver
KSSS2	Action Required	Employer	Employer has not started the employee on KiwiSaver since receiving the first request
TAXCDE	Errors requiring resolution	Employer	Incorrect tax code on Employment Service
RTNCMP	Event notification	Return	Assessment created
NEWMAL	Event notification	Customer	You have new mail
COLCAS	Request for information	Compliance	Collections case—Request for information
RTNPRC	Request for information	Compliance	Returns processing—Request for information
PIR	Action Required	PIE	Prescribed Investor Rate
ACCLNK	Event notification	Customer	An account has been linked to a business intermediary
ACCDLK	Event notification	Customer	An account has had a link removed or ceased for a business intermediary
ACCREG	Event notification	Customer	A new account has been registered
ACCCLS	Event notification	Customer	Account cease date has changed
COMSTS	Event notification	Customer	There has been a change to a company's active/non-active status
EOTCHG	Event notification	Return	Extension of time has changed
BALDAT	Event notification	Return	Balance date has changed
ACTBAS	Event notification	Return	Accounting basis has changed
PRVMTD	Event notification	Return	Provisional tax method has changed
PRVASM	Event notification	Return	A provisional tax assessment has changed

Type	Category	Sub-category	Description
INCGRP	Event notification	Return	Individual group indicator has changed
FILFRQ	Event notification	Return	Filing frequency has changed
TXPADD	Event notification	Return	A tax pooling indicator has been added
TXPRMV	Event notification	Return	A tax pooling indicator has been removed
RTNDUE	Event notification	Return	A return is now overdue
RTNDAS	Event notification	Return	A new default assessment has been added
RTNAVL	Event notification	Return	A return is now available to be filed
CSTSUB	Event notification	Customer	Customer sub-type has changed
DISPEN	Action required	Refund	A refund is pending and requires an updated bank account
INCWFT	Action required	Income Tax	WfFTC is waiting for an Income tax assessment
DTCINF	Action required	Income Tax	A donation tax credit application requires more information
QCIRMV	Event notification	Income Tax	A qualifying company indicator has been removed
LTCADD	Event notification	Income Tax	A look through company indicator has been added
LTCRMV	Event notification	Income Tax	A look through company indicator has been removed
CNGADD	Event notification	Income Tax	A consolidated group indicator has been added
CNGRMV	Event notification	Income Tax	A consolidated group indicator has been removed
CNMADD	Event notification	Income Tax	A consolidated group member indicator has been added
CNMRMV	Event notification	Income Tax	A consolidated group member indicator has been removed

Type	Category	Sub-category	Description
MAOADD	Event notification	Income Tax	A Māori authority indicator has been added
MAORMV	Event notification	Income Tax	A Māori authority indicator has been removed
ANRCHG	Event notification	Income Tax	Agent non-resident insurer has changed
ICAADD	Event notification	Income Tax	An imputation group (ICA) indicator has been added
ICARMV	Event notification	Income Tax	An imputation group (ICA) indicator has been removed
IMGADD	Event notification	Income Tax	An imputation group member indicator has been added
IMGRMV	Event notification	Income Tax	An imputation group member indicator has been removed
TRNTAS	Event notification	Income Tax	Trans-Tasman has changed
INCFNR	Action required	Income Tax	An IR4J/8J has not been received
RTNINN	Action required	Income Tax	An automatic income tax assessment requires more information to finalise

4.1.1 KSSS1—KiwiSaver first request

Field	Example	Description
ID Type	IRD	Employer ID type
ID	132439958	Employer ID
Subject ID Type	IRD	Employee ID type

Document Location ID	3518325776	Location ID of where documents are organised. NOTE: Document LocationID can be used in the "Document service" to upload a requested document.
Due Date	N/A	Unused

4.1.7 RTNPRC—Return processing: Request for information

Field	Example	Description
ID Type	ACC	Account ID type
ID	139159608GST003	Account ID
Subject ID Type	IRD	Customer ID type
Subject ID	139159608	Customer ID
Ext ID	1770753664	Return submission key (if exists)
Ext ID Type	RTNSUB	Submission key associated to the return
Filing Period	2019-03-31	Filing period of the return
Document ID	3518538779	Document ID of the letter requesting information. NOTE: Document ID can be used in the "Document service" to upload a requested document.
Document Location ID	3518899223	Location ID of where documents are organised. NOTE: Document LocationID can be used in the "Document service" to upload a requested document.
Due Date	N/A	Unused

4.1.8 PIR—Prescribed Investor Rate

Field	Example	Description
ID Type	ACC	Account ID type
ID	139026020PIE003	PIE account ID
Subject ID Type	IRD	Payee ID type
Subject ID	139026020	Payee ID
Ext ID	N/A	Unused
Ext ID Type	N/A	Unused
Filing Period	2019-03-31	Filing period of the PIE certificates
Document ID	N/A	Unused
Document Location ID	N/A	Unused
Due Date	N/A	Unused

4.1.9 ACCLNK—Account linked

4.1.9.1 *Link types supported*

Link type	ID Type	ID Example
Tax agent	ACC	049051905INC001
Bookkeeper	ACC	059717502GST002
